		DESCRIPTION
		This category covers papers which report on any type of research undertaken by the author(s). The research may involve the construction or testing of a model or framework, action research, testing of data, market research or surveys, empirical, scientific or clinical research.
		Is a brief article describing a pretrial feasibility or pilot efficacy study that addresses important clinical questions. It might also include recommendations and conclusions of the research.
		These papers will not be based on research but will develop hypotheses. The papers are likely to be discursive and will cover philosophical discussions and comparative studies of others' work and thinking.
○	**Case Study**	
○	**Literature Review**	A Literature review is a survey of articles, books, and other sources relevant to a particular issue, field of research, or theory. It collects key sources on a topic and discusses those sources in conversation with each other (also called synthesis).
○	**General Review**	General Reviews synthesize and discuss established knowledge, frameworks, or historical developments. General reviews provide integrative and descriptive overviews intended to build understanding of a concept, phenomenon, or methodological tradition, and may include instructional elements such as models, tools, or approaches used in practice or research.

ne of the lead causes of extinction in birds in Pacific Islands. We show for the first time how even in interior forest where birds were thought to be safe from rats they are being eaten.

Example 2:
As life expectancy declines, people are more willing to engage in risky behavior, such as fighting in a civil war. We test this theory using a tragic natural experiment: the HIV/AIDS epidemic in sub-Saharan Africa. It finds that decreases in life expectancy caused by the disease increase the probability of civil war.
